RE: CHANGES TO THE EXTERIOR OF THE ORIGINAL CRANBROOK CPR STATION OVER THE YEARS

The existing “modernized” building is, in fact, the original 1898 station, but with an enlargement (to three stories) in 1905. In 1946, a major exterior “modernization” was done by the CPR as part of a larger “modernization” scheme for selected stations across the country. A re-construction of a part of the second floor to the north-east (that had been removed in 1946) was done in the 1970’s and more exterior modernization was done in the 1990’s.

The building is probably THE most important historic symbol of the importance of the railway to the city and to Cranbrook’s ascendancy in size over all other communities in the south-east of BC.

The idea of saving and restoring the structure for long-term use as an important part of Cranbrook and Railway Heritage goes back to the formation of the Cranbrook Archives, Museum and Landmark (“CAMAL”) Foundation in 1976. It was also an important part of the Museum Master Plan done by professional consultants under a National Museums of Canada program in 1990. That Plan noted “*the building should be saved regardless of what uses it might be put to*”. It also noted that the Museum did not necessarily have to own the building - the City could - but that the exterior restoration should be monitored by the Museum to ensure that authentic heritage aspects were retained.

There has been talk, since the late 1960’s, of the railway relocating its’ operations to other strategic locations, including Wasa, Fort Steele and Golden. In the mid-1990’s, when it appeared that the CPR might actually move the majority of its operations to Fort Steele Junction and vacate all or part of the station, the City (with then-Mayor Mike Patterson) took the position that the city could obtain the building and lease necessary space back to the CPR if requested. Other uses such as Chamber of Commerce, community groups (arts, etc.) and potential commercial rentals were also discussed in general to make the building useful to the community and perhaps make some earned revenue.

As of Sept/09, the station has been vacated, with operating railway staff moved to facilities at Fort Steele Junction. The CPR has yet to make disposition plans known as of the date of this letter.

The City should be aware of disposition plans if and when this heritage building and land becomes available. The building and land represent the last part of the heritage plan to be done in the Museum Development Zone. The Zone is a very large (1.4 km long) tract of land which the city began to assemble in 1987 and completed by 1999. It is understood that the City paid market value for all of the pieces of land acquisition over that 12 year-period as the land became available, mostly from the Railway.
